DETAILED ACTION

1. This action is responsive to the Applicant's response filed 6/10/2005.

As indicated in Applicant's response, claims 1, 4-5 have been amended, claim 9 added, and claim 3 canceled. Claims 1-2, 4-9 are pending in the office action.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Lord, Reg. # 46479 on 8/25/2005.

The application has been amended as in the following.

In claim 1, amend line 1 as follows:

A <u>computer-implemented</u> method of debugging software comprising:

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

3. Claims 1-2, and 4-9 are allowed.

The following is an examiner's statement of reasons for allowance:

A method for debugging software comprising (i) obtaining a input list test vector, a software module, and a bug list comprising a minimal set of stimuli to reproduce a software bug in the software module; generating a output vector by applying the input list test to such software module; (ii) applying a comparison test to such output vector to determine whether a bug exists

Art Unit: 2193

in said module then applying a module decomposition test to said module when the comparison test is positive; (iii) obtaining a module decomposition list having 2 or more submodules of said module and iteratively processing said list whenever said decomposition test is positive, such processing comprising removing at least one submodule; and (iv) appending said software module and said input test vector to the bug list when said module is a minimal module based on the decomposition list determined from the decomposition test; as recited in claims 1 and 9.

The prior art taken separately or jointly does not suggest or teach the following features.

Darty, USPN: 6,173, 440, discloses a fault detection method wherein a fault detection matrix is created from runtime data, such matrix associates a set of code with a set of test points therefor and a corresponding set of pass/fail results; such runtime testing mapping for each test point in a code with expected values so that the failed test points can be regrouped for further rerun. But Darty does not teach or suggest all together the sequence of input and output test vectors as in (i) followed by comparison test as (ii), a decomposition test done iteratively as in (iii) and a bug list as in (iv).

Tokuda, USPN: 6,735,581, discloses a fuzzy system method of automatically generating a multi-variable decomposition technique wherein sample sets are decomposed into clusters each associated with a given set of input variables to generate output based upon applying fuzzy rules; then integrating the results back into the system such that error in each iterative stage to be specified; but fails to disclose or suggest all together the sequence of input and output test vectors as in (i) followed by comparison test as (ii), a decomposition test done iteratively as in (iii) and a bug list as in (iv).

Application/Control Number: 09/943,209

Art Unit: 2193

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan A Vu whose telephone number is (272) 272-3735. The examiner can normally be reached on 8AM-4:30PM/Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kakali Chaki can be reached on (571)272-3719.

The fax phone number for the organization where this application or proceeding is assigned is (571) 273-3735 (for non-official correspondence – please consult Examiner before using) or 571-273-8300 (for official correspondence) or redirected to customer service at 571-272-3609.

Any inquiry of a general nature or relating to the status of this application should be directed to the TC 2100 Group receptionist: 571-272-2100.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-\$197 (toll-free).
